

The FAA Safety Team presents:

IIMC: Real Threat, Lethal Consequences, Realistic Interventions at HAI HELI-EXPO 2015

Inadvertent flight into instrument meteorological conditions (IIMC) continues to be one of the leading lethal threats to helicopter pilots and their crew and passengers. Despite advances in aircraft and avionics, we continue to suffer IIMC-related fatalities year after year. This session will look at the unique aspects of IIMC and why it continues to claim so many lives. IIMC survival methods based on a safety management system approach, including training, crew resource management, policy suggestions, and survival techniques, will be discussed.

Students will learn: The fundamental aspects of IIMC and why they differ from planned flight into IMC How one can better deal with inadvertent flight into IMC through training, procedure changes, crew resource management, and flying techniques.

Directions: Level III South

A message from the National FAASafety Team Manager

Invite a fellow pilot to the next WINGS Safety Seminar in your area.
Sign up for the FAA's safety services at www.FAASafety.gov!

The FAA Safety Team (FAASafety Team) is committed to providing equal access to this meeting/event for all participants. If you need alternative formats or services because of a disability, please communicate your request as soon as possible with the person in the "Contact Information" area of the meeting/event notice. Note that two weeks is usually required to arrange services.
